NOTIFICATION DATE		DELIVERY MODE				
04/08/2009		ELECTRONIC				

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

patentdocket@oblon.com
oblonpat@oblon.com
jgardner@oblon.com

Office Action Summary	Application No. 10/580,645	Applicant(s) IIDA, SACHIO
	Examiner AJIBOLA AKINYEMI	Art Unit 2618

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If no period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED. (35 U.S.C. § 133).

Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 24 December 2008.

2a) This action is FINAL. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 9-20 is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5) Claim(s) _____ is/are allowed.

6) Claim(s) 9-20 is/are rejected.

7) Claim(s) _____ is/are objected to.

8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on 25 May 2006 is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some * c) None of:

1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1) Notice of References Cited (PTO-892)

2) Notice of Draftsperson's Patent Drawing Review (PTO-948)

3) Information Disclosure Statement(s) (PTO-1668)
 Paper No(s)/Mail Date _____

4) Interview Summary (PTO-413)
 Paper No(s)/Mail Date _____

5) Notice of Informal Patent Application

6) Other: _____

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 9 is rejected under 35 U.S.C. 102(b) as being anticipated by Feld (Patent No.: US 6281755B1).

With respect to claim 9:

Feld disclosed an amplifier comprising: an amplification device (fig.2, item 2) and an LC parallel resonant circuit (fig.5, item 20) connected in parallel to the amplification device (fig.2, item 2) and an LCR series resonant circuit (fig.5, Ls Cs GL) connected in parallel to the amplification device (fig.2, item 2) and the LC parallel resonant circuit (fig. 5).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. Claim 10, 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feld (Patent No.: US 6281755B1) and further in view of Kaczynski (2007/0111684A1).

With respect to claim 10:

Feld disclosed an amplifier comprising: an amplifier device (fig. 5) and an LC parallel resonant circuit (fig. 5, item 20) and an LCR series resonant circuit (fig. 5, Ls Cs GL) provided in parallel as a load for the amplifier device. Feld did not disclose an amplifier wherein a common gate circuit and a cascade circuit are combined. Kaczynski disclosed an amplifier wherein a common gate circuit and a cascade circuit are combined (parag.0034). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have a common gate circuit and cascade circuit combined together in order to amplify the signal.

With respect to claim 11:

Feld disclosed an amplifier comprising: an amplifier device (fig. 5) and an LC parallel resonant circuit (fig. 5, item 20) and an LCR series resonant circuit (fig. 5, Ls Cs GL) provided in parallel as a load for the amplifier device. Feld did not disclose an amplifier wherein a common-source circuit, a cascade circuit and a voltage feedback circuit are

combined but the examiner take official action that combining common source circuit, a cascade circuit and a voltage feedback is common in the art and it would have been obvious to one of ordinary skill in the art at the time the invention as made to have this limitation in order to amplify the signal.

6. Claims 12, 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feld (Patent No.: US 6281755B1) and further in view of Shohara (Pub. No.: US 2005/0078743A1).

With respect to claims 12:

Feld disclosed a wireless apparatus comprising an antenna (col.4, lines53-55), a band pass filter (col.3, lines 56-62), an amplification device (fig.2, item 2), LC parallel resonant circuit (fig.5, item 20) connected in parallel to the amplification device (fig.2, item 2, since the matching circuit 8 in fig.2 is connected to item 2 in fig. 2) and an LCR series resonant circuit (fig. 5, Ls Cs GL) connected in parallel to the amplification device (fig.5) and the LC parallel resonant circuit (fig. 5, item 20). Feld did not disclose low noise amplifier, converter, automatic gain control, ADC, and a processor .Shohara disclosed a wireless communication apparatus comprising a low noise amplifier configured to amplify a voltage of a received signal (parag. 0034), a down-converter (fig.1, item 14) configured to down-convert the voltage-amplified received signal by frequency conversion, an automatic gain controller (fig.1, item 28), an analog-digital converter (fig.1, item 18), and a signal processing circuit configured to perform digital signal processing of received data (fig.1, item 50). It would have been obvious to one of

ordinary skill in the art at the time the invention was made to have all this limitation for a design choice.

With respect to claims 13:

Feld disclosed a wireless apparatus comprising an antenna (col.4, lines53-55), a band pass filter (col.3, lines 56-62), an amplification device (fig.2, item 2), LC parallel resonant circuit (fig.5, item 20) connected in parallel to the amplification device (fig.2, item 2, since the matching circuit 8 in fig.2 is connected to item 2 in fig. 2) and an LCR series resonant circuit (fig. 5, Ls Cs GL) connected in parallel to the amplification device (fig.5) and the LC parallel resonant circuit (fig. 5, item 20). Field did not disclose a low noise amplifier which amplifies a voltage of a received signal, a down-converter which down-converts the voltage-amplified received signal by frequency conversion, an automatic gain controller, an analog-digital converter, a digital- analog converter which converts transmit data to an analog signal, an up-converter which up- converts the analog transmit signal by frequency conversion, a power amplifier which amplifies power of the up-converted transmit signal, and a signal processing circuit which performs digital signal processing of transmit/receive data. Shohara discloses a wireless communication apparatus comprising a low noise amplifier (parag.0034) configured to amplify a voltage of a received signal, a down-converter (fig.1, item 14) configured to down-convert the voltage-amplified received signal by frequency conversion, an automatic gain controller (fig.1, item 28), an analog-digital converter (fig.1, item 18), a digital- analog converter (fig.1, item 44) which converts transmit data to an analog signal, an up-converter (fig.1, item 48) configured to up- convert the analog transmit

signal by frequency conversion, a power amplifier (parag.0034) configured to amplify power of the up-converted transmit signal, and a signal processing circuit (fig.1, item 50) configured to perform digital signal processing of transmit/receive data. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have all this limitation for a design choice.

7. Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over Feld (Patent No.: US 6281755B1) and further in view of Kasuga (patent No.: US 4524422)

With respect to claim 14:

Feld disclosed an amplification device (fig.2, item 2) and a band pass filter (col.3, lines 56-62) connected to the output terminal of the amplification device (fig.2, item 2). Feld did not disclose s-plane in which the plurality of pole is provided and zero are provided between the poles. Kasuga discloses a band pass filter with s-plane in which the plurality of pole is provided and zero are provided between the poles (col.2, lines 54-59). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have s-plane in which the plurality of pole is provided and zero are provided between the poles simply for design choice.

8. Claims 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feld (Patent No.: US 6281755B1) and further in view of Kasuga (patent No.: US 4524422) and Daners (Patent No.: US 6229393B1).

With respect to claim 15 and 16:

The rejection of claim 14 is incorporated; Feld and Kasuga did not disclose capacitor and inductance not in series between an output terminal of the amplifier device and output terminal of amplifier. Daners disclosed capacitor and inductance not in series between an output terminal of the amplification device and output terminal of amplifier (fig.1b). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have a capacitor and inductance not in series between an output terminal of the amplifier device and output terminal of amplifier for a design purpose.

9. Claims 17 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feld (Patent No.: US 6281755B1) and further in view of Kasuga (patent No.: US 4524422) and Kaczynski (2007/0111684A1).

With respect to claim 17:

The rejection of claim 14 is incorporated; Feld and Kasuga did not disclose common gate circuit and a cascade circuit combine together. Kaczynski disclosed an amplifier wherein a common gate circuit and a cascade circuit are combined (parag.0034). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have a common gate circuit and cascade circuit combined together in order to amplify the signal.

With respect to claim 18:

The rejection of claim 14 is incorporated; Feld and Kasuga did not disclose a common source circuit, a cascade and voltage feedback circuit to be combined but the examiner take official action that combining common source circuit, a cascade circuit and a

voltage feedback is common in the art and it would have been obvious to one of ordinary skill in the art at the time the invention was made to have this limitation in order to amplify the signal.

10. Claims 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Feld (Patent No.: US 6281755B1) and further in view of Kasuga (patent No.: US 4524422) and Shohara (Pub. No.: US 2005/0078743A1).

With respect to claim 19:

Feld disclosed a wireless apparatus comprising an antenna (col.4, lines53-55), a band pass filter (col.3, lines 56-62), an amplification device (fig.2, item 2), LC parallel resonant circuit (fig.5, item 20) connected in parallel to the amplification device (fig.2, item 2, since the matching circuit 8 in fig.2 is connected to item 2 in fig. 2) and an LCR series resonant circuit (fig. 5, Ls Cs GL) connected in parallel to the amplification device (fig.5) and the LC parallel resonant circuit (fig. 5, item 20). Feld did not disclose s-plane in which the plurality of pole is provided and zero are provided between the poles, low noise amplifier, converter, automatic gain control, ADC, and a processor. Kasuga discloses a band pass filter with s-plane in which the plurality of pole is provided and zero are provided between the poles (col.2, lines 54-59). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have s-plane in which the plurality of pole is provided and zero are provided between the poles simply for design choice. Shohara disclosed a wireless communication apparatus comprising a low noise amplifier configured to amplify a voltage of a received signal (parag. 0034), a

down-converter (fig.1, item 14) configured to down-convert the voltage-amplified received signal by frequency conversion, an automatic gain controller (fig.1, item 28), an analog-digital converter (fig.1, item 18), and a signal processing circuit configured to perform digital signal processing of received data (fig.1, item 50). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have all this limitation for a design choice.

With respect to claim 20:

Feld disclosed a wireless apparatus comprising an antenna (col.4, lines53-55), a band pass filter (col.3, lines 56-62), an amplification device (fig.2, item 2), LC parallel resonant circuit (fig.5, item 20) connected in parallel to the amplification device (fig.2, item 2, since the matching circuit 8 in fig.2 is connected to item 2 in fig. 2) and an LCR series resonant circuit (fig. 5, Ls Cs GL) connected in parallel to the amplification device (fig.5) and the LC parallel resonant circuit (fig. 5, item 20). Feld did not disclose s-plane in which the plurality of pole is provided and zero are provided between the poles, low noise amplifier, converter, automatic gain control, ADC, and a processor. Kasuga discloses a band pass filter with s-plane in which the plurality of pole is provided and zero are provided between the poles (col.2, lines 54-59). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have s-plane in which the plurality of pole is provided and zero are provided between the poles simply for design choice. Shohara discloses a wireless communication apparatus comprising a low noise amplifier (parag.0034) configured to amplify a voltage of a received signal, a

down-converter (fig.1, item 14) configured to down-convert the voltage-amplified received signal by frequency conversion, an automatic gain controller (fig.1, item 28), an analog-digital converter (fig.1, item 18), a digital- analog converter (fig.1, item 44) which converts transmit data to an analog signal, an up-converter (fig.1, item 48) configured to up- convert the analog transmit signal by frequency conversion, a power amplifier (parag.0034) configured to amplify power of the up-converted transmit signal, and a signal processing circuit (fig.1, item 50) configured to perform digital signal processing of transmit/receive data. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have all this limitation for a design purpose.

Response to Arguments

11. Applicant's arguments with respect to claims 14, 19 and 20 have been considered but are moot in view of the new ground(s) of rejection. Regarding claims 9, 12, and 13, applicant argued that Feld reference did not teach LC parallel to the amplifier and LCR parallel to LC and both LC and LCR are not connected to the amplification device. Examiner respectfully disagrees with this statement because fig. 2, item 2 shows an amplification device item 2 which is connected to matching network item 8, the matching network 8 is the LC and LRC in fig. 5 which are connected to the amplifier YL in fig. 5.

Conclusion

12. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to AJIBOLA AKINYEMI whose telephone number is (571)270-1846. The examiner can normally be reached on monday- friday (8.30-5pm) Est. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, YUWEN PAN can be reached on (571) 272-7855. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status

information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
